# Support USB OTG Android Phones

Google introduced OTG since Android 3.1 (Honeycomb)

Host Device

Computers act as a Host and manage devices to connect to the system.

Host Device

USB OTG is a standard that allows smartphones to access USB drive just like a computer

# i-FlashDrive App for Android

A complete migration from original iOS version

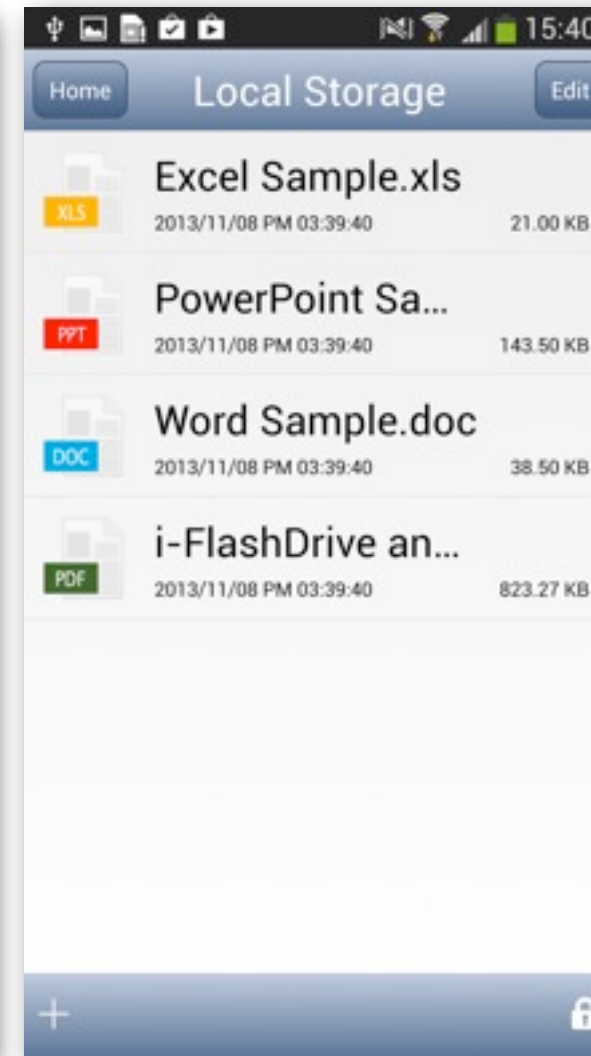

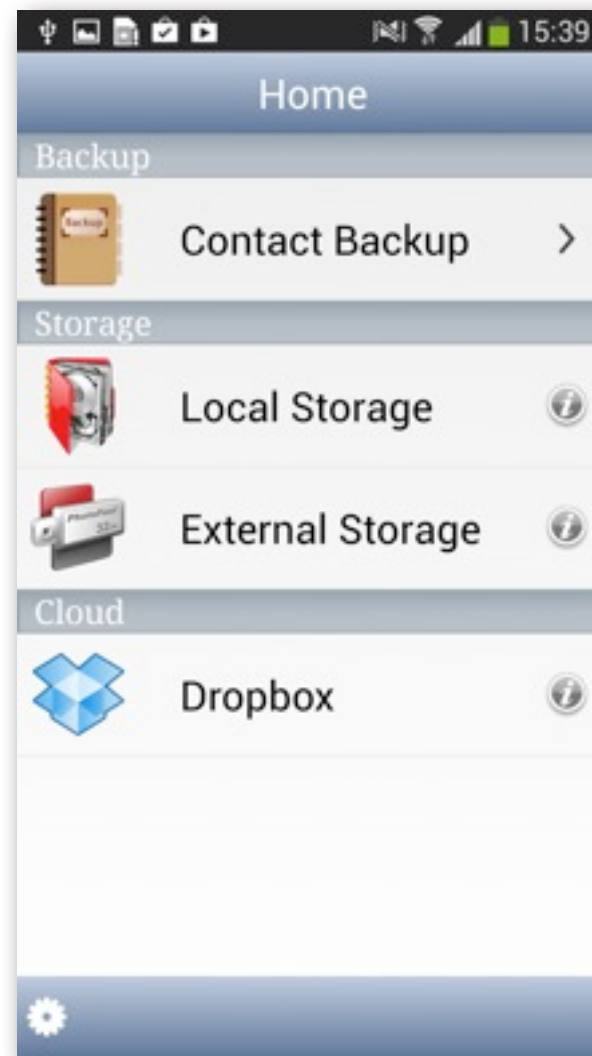

[i-FlashDrive](#)

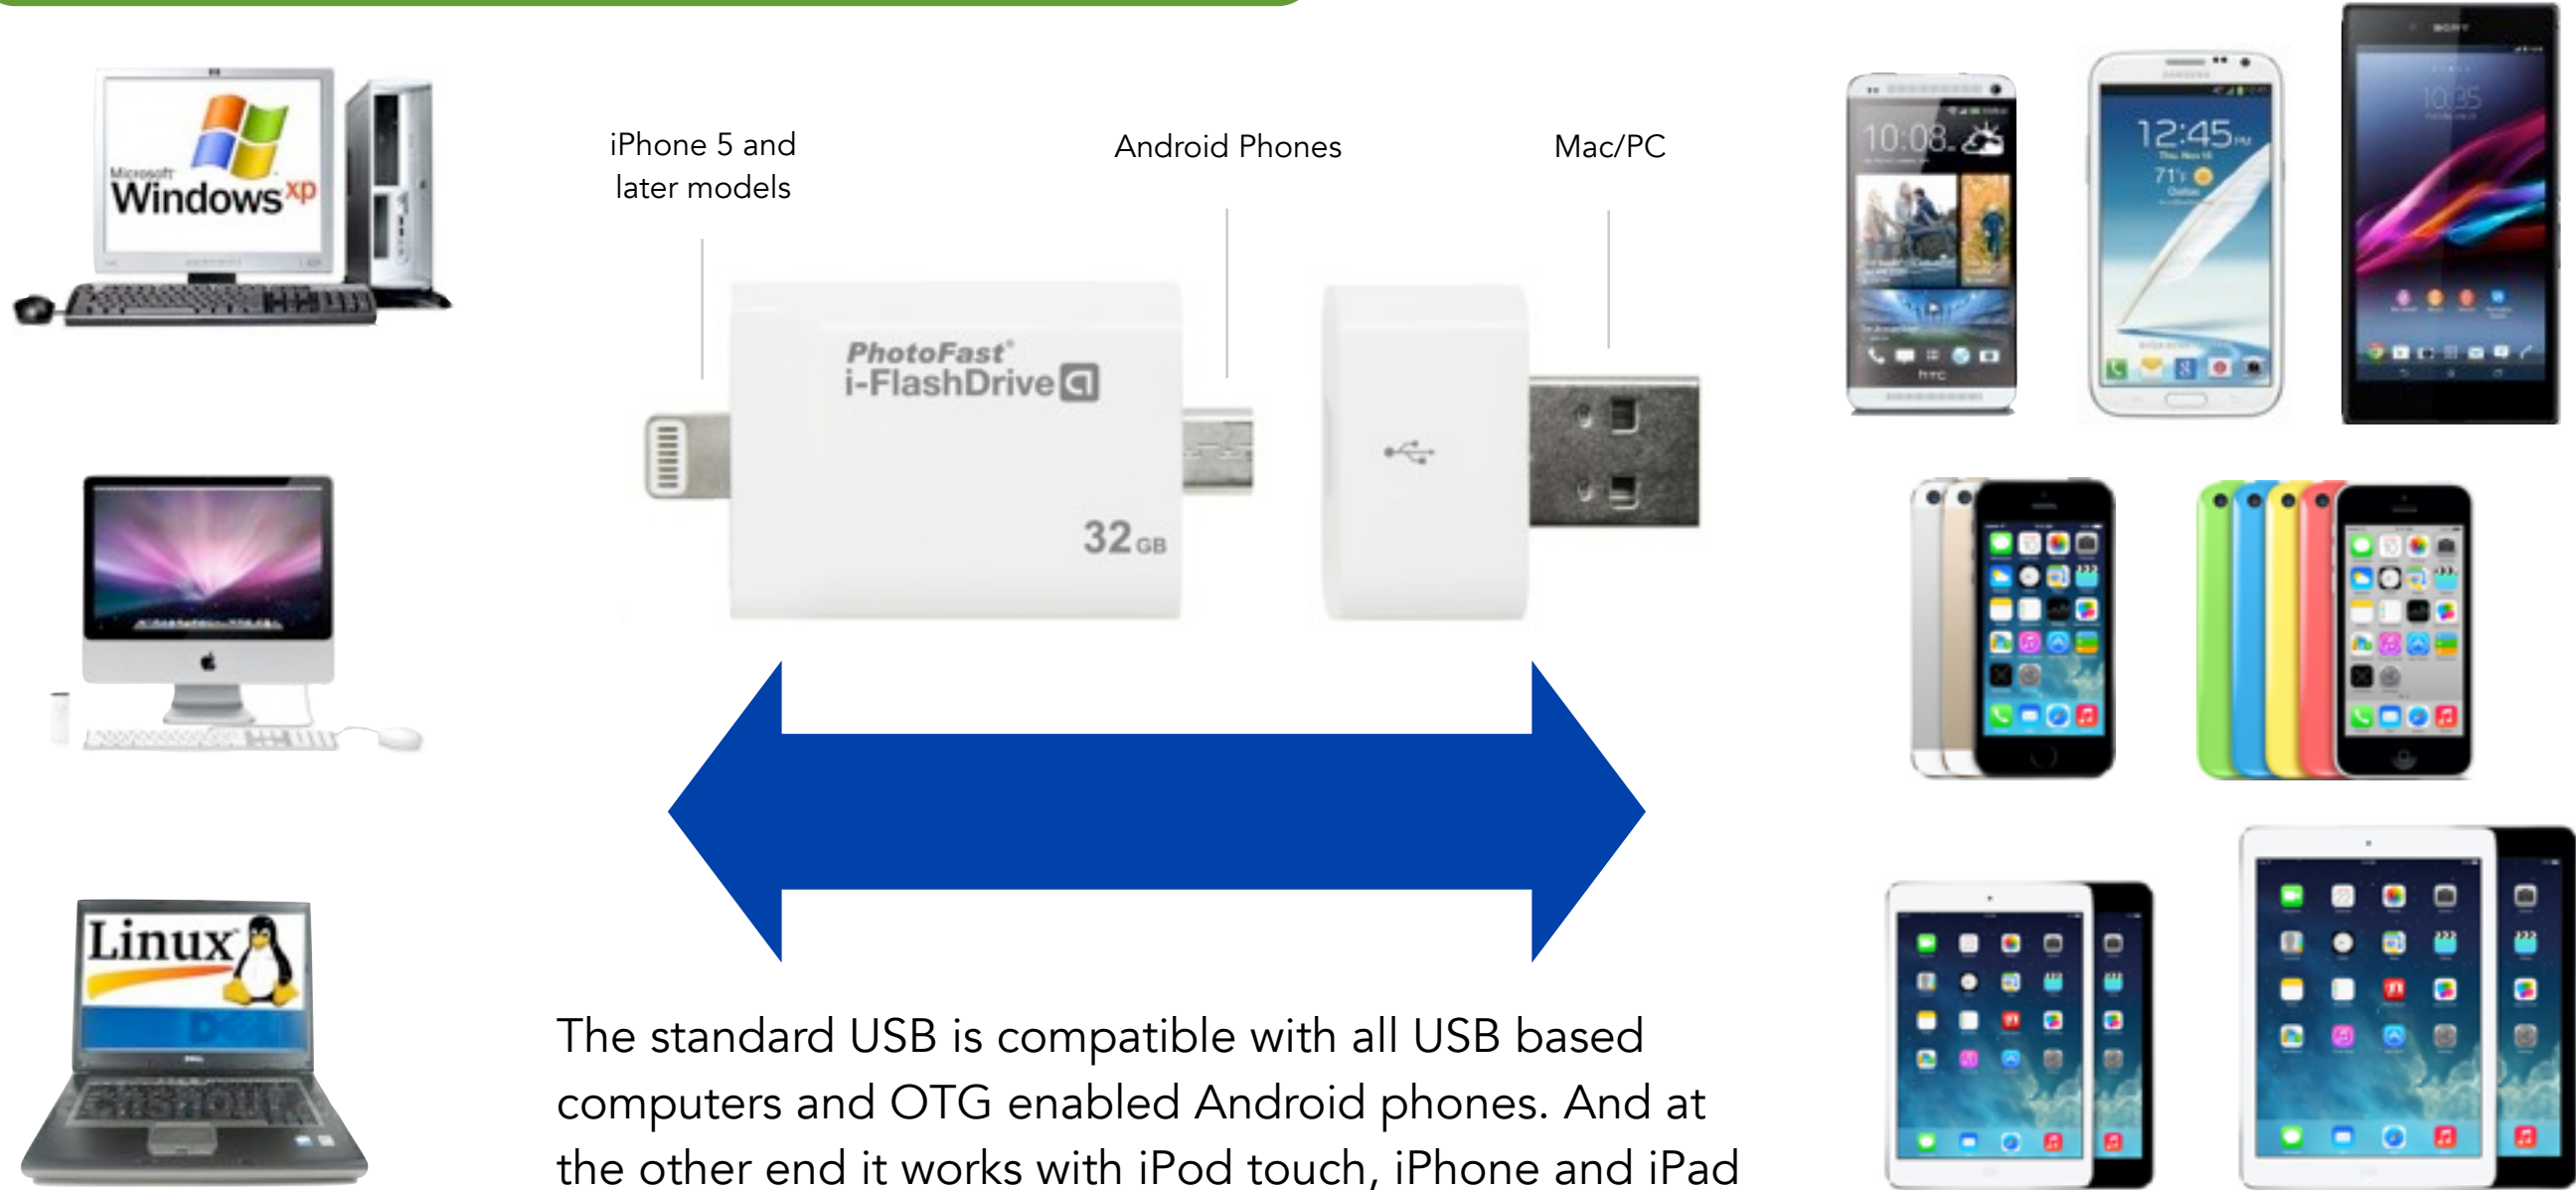

On Android system , i-FlashDrive-a is considered a mass storage device that any file manage App could get access to.

Even though, we still wrote our own App under Android OS with the same User Interface as the original one on iOS. We wish to present the same experience from iOS version, which user shouldn't have to learn how to use it again.

# How i-FlashDrive for Android is different ?

It's the only flash-drive that is cross platforms

# How i-FlashDrive is different ?

What you'll get only on i-FlashDrive

## Direct File Transfer

So in the end, when we'd like to transfer files with another person. The plug-unplug i-FlashDrive is still the simplest way.

## Without network

At all the file transfer when using i-FlashDrive, network is not required.

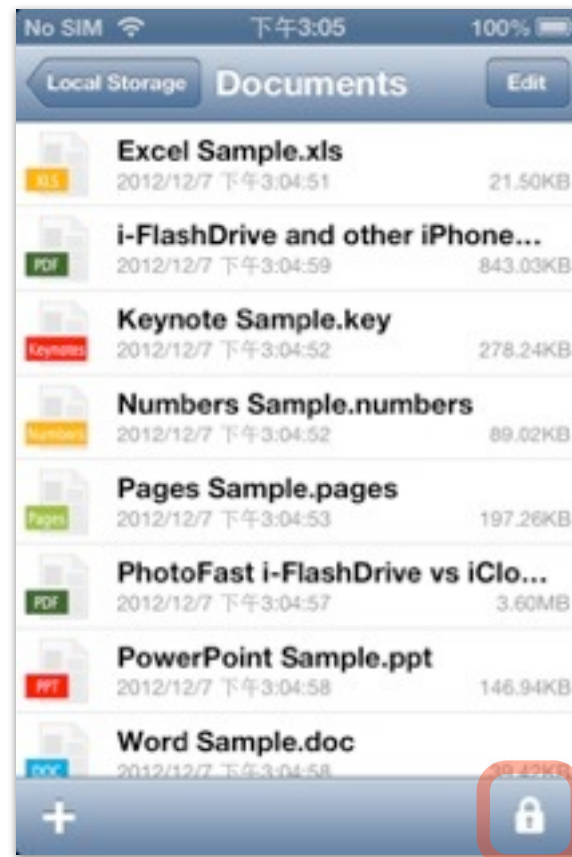

## Free App for file management

There's a free App for this accessory that created a user interface for file management which most of us are familiar with. It has also built-in Music Play UI, Photo Import from CameraRoll, and voice recording. Those function that comes very handy in daily use.

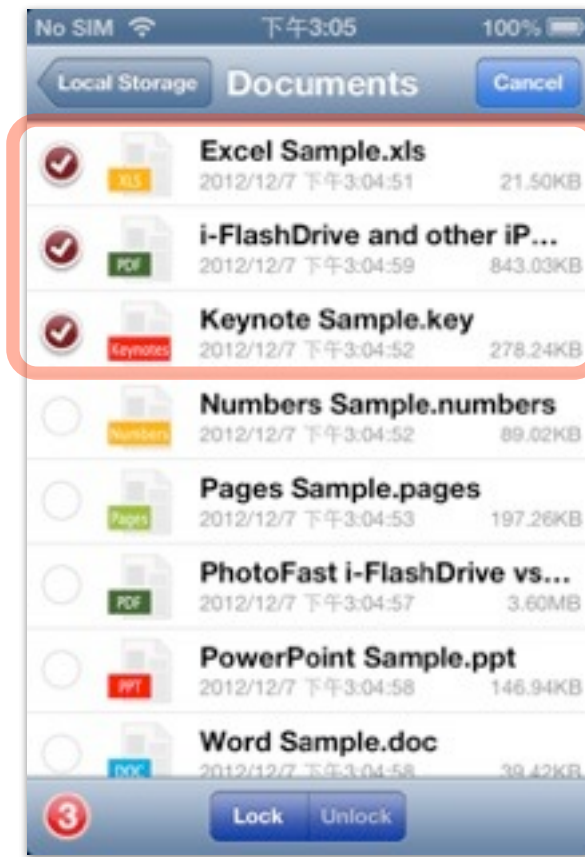

# Look into the functionality of i-FlashDrive App

File Encryption on individual files

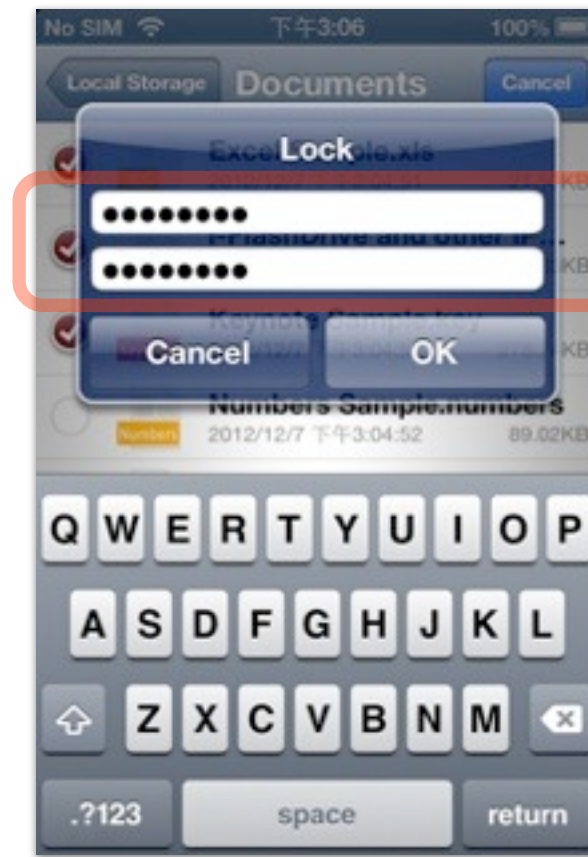

## File Lock button

Tab the icon to enable Lock Mode.

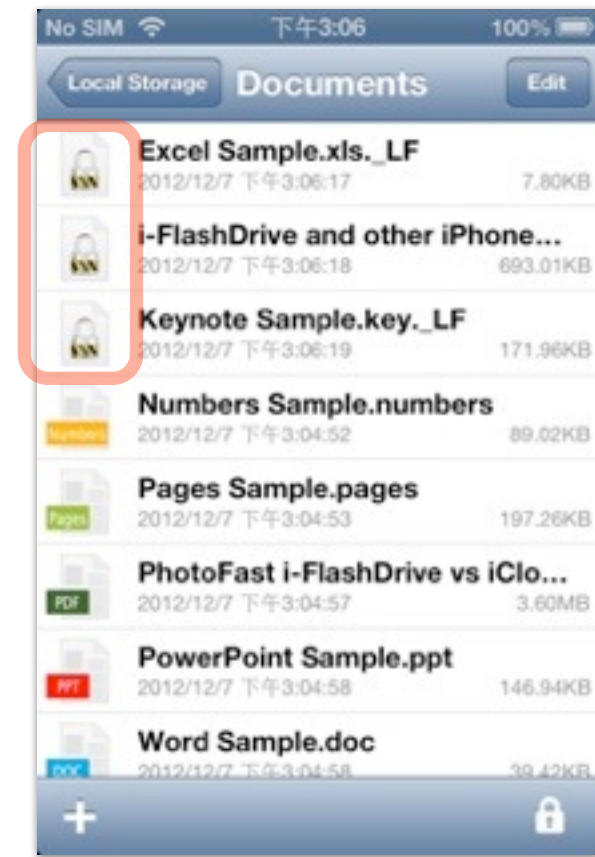

## Select files to lock

In Lock Mode, select those files you wish to lock up

## Add password to

Type your password twice to avoid mistype.

## Locked file type

Locked files have different type of icon to the original.

## Contact Backup and Restore

### Contact Backup menu

Two simple backup and restore buttons for one-touch backup.

(vCard is an open format of address book)

### Backing Up process

In above screenshot, there are 350 contacts being backup.

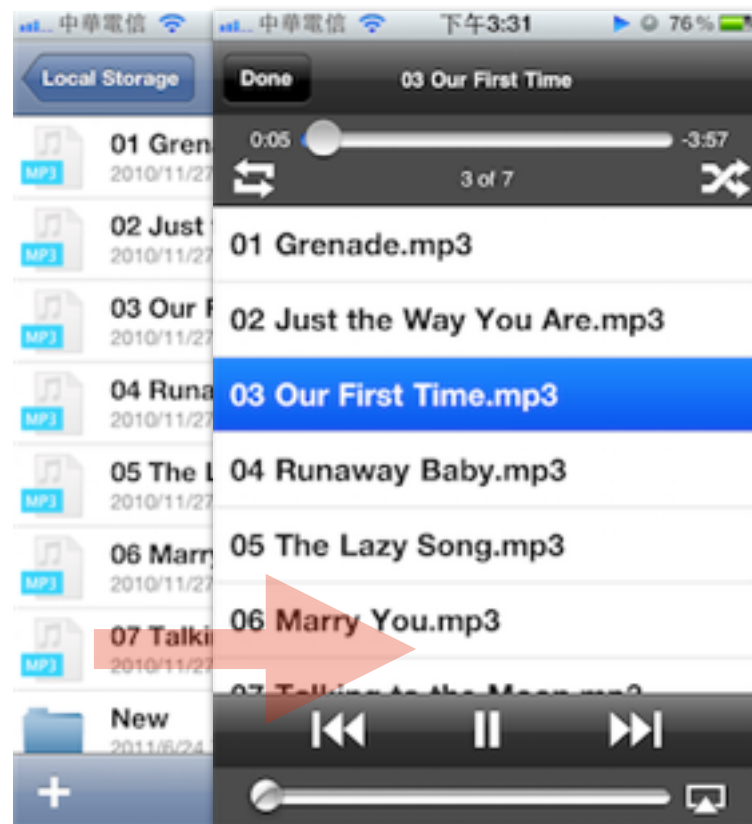

### Contact Restore menu

In above screenshot, there are 3 records of contact backup. Records are being arranged in date and time. Tap to restore from the records.

# Look into the functionality of i-FlashDrive App

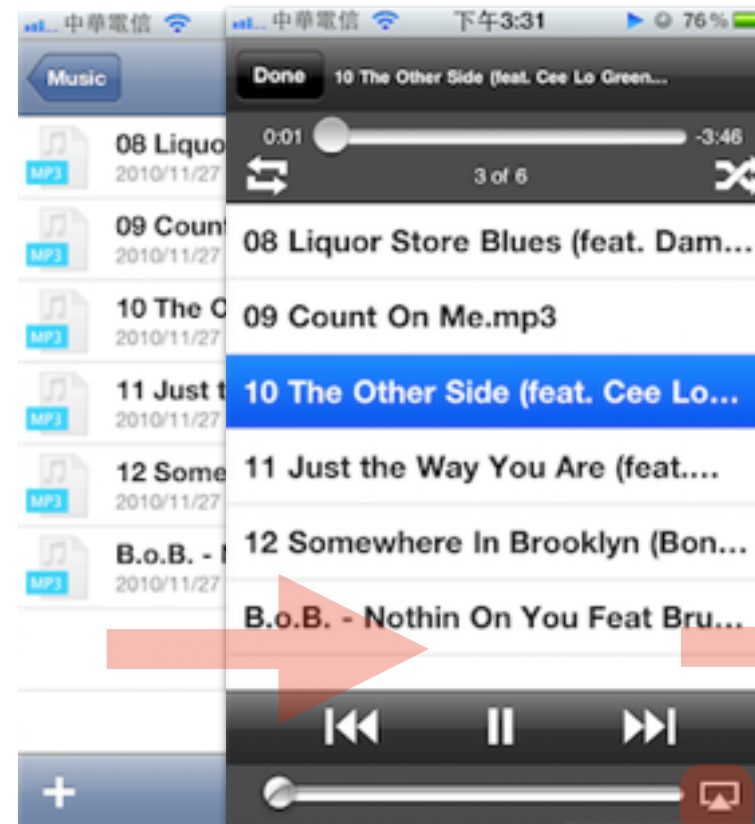

## Music play interface

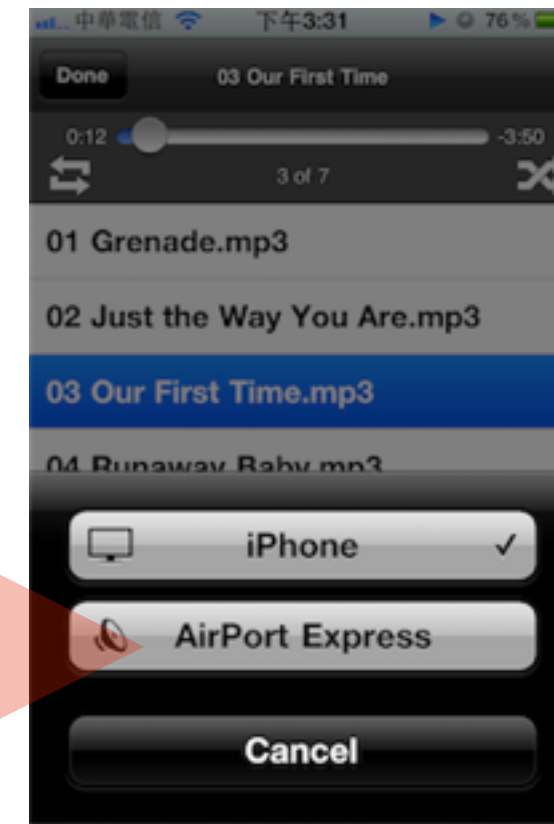

### Playlist in folders

By tapping any mp3 in a folder, the App automatically generates a playlist including all songs in the same folder. (not including sub-directory)

### New Playlist

Move/put songs into a new folder, then it's a new playlist. It's just that simple.

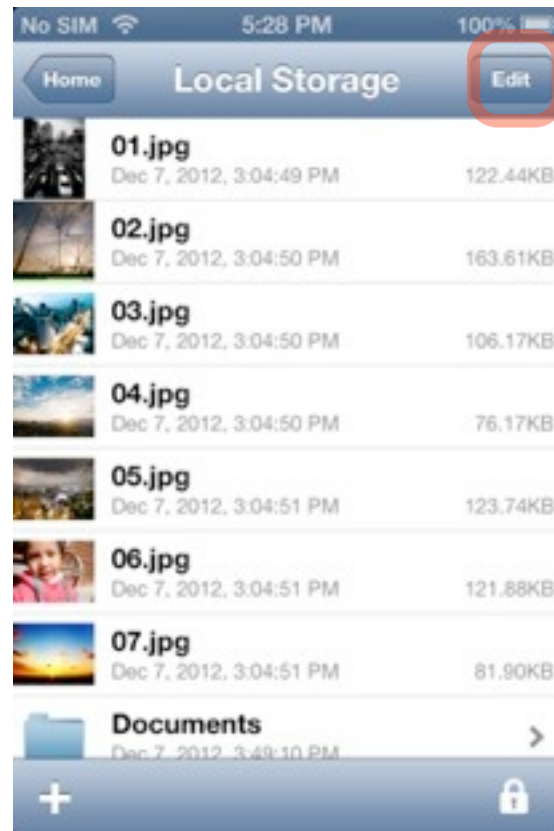

### Alternative outputs

when BlueTooth or AirPlay is available in the same environment, the optional button will become available to choose outputs

# Look into the functionality of i-FlashDrive App

## File transfer functions

### Edit mode

Tab on Edit button to enable Edit Mode

### Action bar

Tab on "Copy" button to copy selected files. Or perform other action on other buttons

### Select drive

Tab "External Storage" to save files onto i-FlashDrive

### Select folder

Select the folder to save files by tab "Copy here"
